Introduction	xix

Part I

Architect for Virtualization

▼ 1 The Move to Virtualization	3
In Comes Virtualization	5
Before You Begin	8
Use a Five-Step Process	11
▼ 2 Begin the Five-Step Process	13
Step One: Discovery	14
Inventory, Inventory, Inventory	15
Scan for Potential Virtualization Candidates	16
Categorize Server Resources	21
Rationalize Everything	23

Step 2: Virtualization	23
Defining Virtualization	25
What Is a Virtual Machine?	30
Server Virtualization Models	32
Major Server Virtualization Vendors	34
Desktop Virtualization	39
Application Virtualization	40
Work with the First Two Steps	43
▼ 3 Complete the Five-Step Process	45
Step 3: Hardware Maximization	46
Move to 64-Bit	46
Rely on Shared Storage	49
Be Aware of Licensing Costs	51
Rely on New Server Form Factors	53
Step 4: Architectures	55
Step 5: Manage Virtualization	57
Focus on VM Management	59
Rely on the Virtualization Decision Flowchart	60

Part II

Build Your Virtualization Infrastructure

▼ 4 Perform a Comprehensive Analysis	65
Begin the Analysis	67
Perform a Storage Consolidation Study	71
Review Existing Network Bandwidth	73
Perform a Power and Cooling Audit	74
Rely on Other Tools	81
Perform a Server Consolidation Study	85
Identify Appropriate Performance Metrics	86
Interpret the Results	88
Rationalize Everything Again	88
▼ 5 Build the Resource Pool	91
Planning and Preparation	92
What to Virtualize	92
Replace Anything Beige	94
Choose the Implementation Method	95
Prepare the Network Layer	95
Networking in Virtual Layers	97
Prepare Storage	99
Prepare Storage Configurations	102
Virtualize Storage	103

Create a Backup Plan	106
Best-in-Breed Storage	106
Prepare Host Servers	107
Server Sizing for Resource Pools	110
Sizing Recommendations for Resource Pools	113
Upgrading Host Servers	114
Rely on Hardware-Integrated Hypervisors	114
Build Your Own Hypervisor Hardware	116
The Next Step	117
▼ 6 Begin with the Testing Environment	119
Work with Different Testing Levels	122
Rely on Virtual Machine Software	124
Physical Versus Logical Workspaces	125
Define Lab Requirements	126
Host Server Configurations	126
Virtual Machine Configurations	127
VM User Accounts	129
Required Server and Workstation Roles	129
Requirements for Each Testing Level	132
Create the Lab Environment	133
Virtual Machines and Software Licensing	135
Build Complete Environments	137
Virtual Laboratory Deliverables	138
Reuse of the Lab Deliverables	142
Reuse of Deliverable 1: Core Machines	142
Reuse of Deliverable 2: Depersonalized Machines	142
Reuse of Deliverable 3: The Base Environment	144
Reuse of Deliverable 4: The Core Environment	144
Virtual Infrastructure Laboratory Management Practices	145
Security Practices	146
Special Build Procedures	147
Backup and Disaster Recovery	147
Lab Maintenance Procedures	148
Virtual Lab Best Practices Summary	149
Move On to the Virtual Datacenter	151
▼ 7 Work with Server Virtualization	153
Choose a Server Virtualization Technology	155
Technologies and Scenarios	156
Server Virtualization Scenarios	158
Other Vendor Offerings	160
VMware Technology Components	161
Citrix Virtualization Technologies	173
Microsoft Virtualization Technologies	176

Virtual Machine Formats	180
VM Disk Types	182
Virtualization Technology Pricing	185
Market-Leader Hypervisor Metrics	187
Market-Leader Hypervisor Positioning	191
▼ 8 Work with Virtual Workloads	193
The Server Virtualization Decision Process	194
Virtual Service Offerings Structure	197
Virtual Resource Allocation Rules	200
Rely on Placement Rules	202
Single Versus Multi-VM Hosts	204
Work with the Network Layer	206
Best Practices in Server Virtualization	207
▼ 9 Provision Virtual Machines	209
Before You Begin	213
Provision New Virtual Machines	215
Create Seed Virtual Machines	216
Provision Using Seed Machines	216
Physical Versus Virtual Provisioning	217
Rely on Virtual Appliances	218
Virtual Appliance Benefits	221
Create Virtual Appliances of Your Own	222
Perform Physical-to-Virtual Conversions	223
P2V Preparation Tasks	223
Perform the P2V	225
Work with VMware Converter	226
Work with PlateSpin PowerConvert	228
Rely on the Ultimate-P2V Plug-in for BartPE	229
Microsoft Conversion Tools	229
Provisioning Best Practices	231
▼ 10 Work with Desktop Virtualization	233
Work with a System Stack	234
Desktop Management Issues	237
Vista State of the Union	237
The Anatomy of a Desktop	238
Move to Desktop Virtualization	239
Available Desktop Virtualization Products	240
Virtual Desktop Licensing	241
Potential Desktop Virtualization Scenarios	243
Identify Desktop Virtualization Audiences	246

Centralized Desktop Virtualization Infrastructures	248
VMware Virtual Desktop Manager	250
Citrix XenDesktop	257
Other Technologies	260
Profit from VDI	262
Major Vendor Positioning	264
Make the Desktop Virtualization Decision	264
▼ 11 Work with Application Virtualization	265
Application Management Issues	266
Traditional Application Management Solutions	267
Redesign Application Management	272
Work with a Virtualization Layer	273
Application Streaming: A New Distribution Strategy	281
Benefits of AppV for the Organization	283
▼ 12 Work with AppV	285
Compare Application Virtualization Products	286
Citrix XenApp	290
InstallFree Bridge	290
Microsoft Application Virtualization	291
Symantec SVS Pro	291
VMware ThinApp	292
Major Vendor Positioning	293
Use the AppV Decision Process	293
Key Points on AppV	294
Integrate Application, Profile, and Desktop Virtualization	296
Assign Applications on Demand	297
Use a Volatile Desktop VM	298
Virtualize User Profiles	299
Create the Personality Protection Strategy	301
Finalize the Personality Protection Strategy	310
Key Points on the Perfect Desktop	310

Part III

Consolidate the Benefits

▼ 13 Secure Your Virtual Infrastructure	313
The Castle Defense System	315
Resource Pools Versus Virtual Service Offerings	317
Secure Resource Pools	319
Secure Virtual Service Offerings	322

Apply the Castle Defense System to the Resource Pool	327
Layer 1: Critical Information	327
Layer 2: Physical Protection	330
Layer 3: Operating System Hardening	332
Layer 4: Information Access	342
Layer 5: External Access	346
Complete the Resource Pool Security Policy	352
▼ 14 Protect Your Virtual Infrastructure	355
Develop your System Protection Strategies	356
Use Standard System Recovery Strategies	357
Hypervisor Manufacturer Offerings	359
Data Protection Strategies for Virtual Service Offerings	366
Select a Third-Party Backup Tool	367
Complete the Recovery Strategy	368
▼ 15 Prepare for Business Continuity	369
Business Continuity Essentials	370
Make the Resource Pool Highly Available	372
Protect Your Virtual Service Offerings	380
Make Virtual Desktops Highly Available	387
Make Virtual Applications Highly Available	392
Make Profiles Highly Available	394
Build Your Business Continuity Strategy	394
Provide Multisite Redundancy	395
Adjust Your Service Level Agreements	396
Business Continuity Management	
Through Replication	397
Choose the Proper Replication Tool	399
Prepare for Site-Based Disasters	401
▼ 16 Update Your Management Structure	403
Look to New Administrative Roles	404
Move to Policy-Based Workloads	404
Policy-Based Resource Management	408
Look to Third-Party Management Tools	414
Update Your Management Practices	417
▼ Afterword	419
Calculate Your Return on Investment	421
▼ Index	423
