INTRODUCTION ..... xix

## PART I

### Oracle and the XML Standards

|          |  |           |
|----------|--|-----------|
| <b>1</b> | <b>Introducing XML</b> .....                             | <b>3</b>  |
|          | What Is an XML Document? .....                           | 4         |
|          | The Prolog .....   | 5         |
|          | The Body .....   | 6         |
|          | Well-Formed XML Documents .....                          | 7         |
|          | Valid XML Documents .....                                | 8         |
|          | XML Namespaces .....                                     | 9         |
|          | XML and the Database .....                               | 11        |
|          | Database Schema and XML Documents .....                  | 11        |
|          | Mapping XML Documents to a Database Schema .....         | 12        |
|          | Summary .....  | 14        |
| <b>2</b> | <b>Accessing XML with DOM, SAX, JAXB, and StAX</b> ..... | <b>15</b> |
|          | Parsing and Binding an XML Document .....                | 16        |
|          | Accessing XML Using the DOM .....                        | 17        |
|          | Introducing the DOM APIs .....                           | 19        |
|          | DOM Level 2 .....  | 22        |
|          | DOM Level 3 .....  | 25        |
|          | Oracle DOM APIs in C .....                               | 27        |
|          | Accessing XML with SAX .....                             | 28        |
|          | SAX Level 1 and Level 2 .....                            | 28        |
|          | Using SAX APIs .....                                     | 31        |
|          | Oracle SAX APIs in C .....                               | 37        |
|          | Accessing XML with Java Binding .....                    | 42        |
|          | The Input XML Schema .....                               | 43        |
|          | Generating XML Classes .....                             | 43        |
|          | Binding to an XML Instance .....                         | 43        |
|          | XML Document Created by Java Application .....           | 44        |

|  |           |
|--|-----------|
| Accessing XML with StAX .....  | 45        |
| Best Practices .....   | 47        |
| DTD Caching .....  | 47        |
| Skipping the <!DOCTYPE> Tag .....  | 47        |
| Cutting and Pasting Across Documents .....                                   | 48        |
| <b>3 Transforming XML with XSLT and XPath .....</b>                          | <b>49</b> |
| Programmatic Invocation of the XSLT Processor .....                          | 51        |
| Navigating XML with XPath .....  | 54        |
| XPath Expressions .....  | 54        |
| Introducing XSLT Stylesheets .....   | 55        |
| XSL Templates .....  | 56        |
| The XSLT Process Model .....   | 56        |
| <xsl:apply-imports> .....  | 56        |
| <xsl:apply-templates> .....  | 56        |
| Introducing XSLT 2.0 .....   | 57        |
| Grouping .....   | 57        |
| Function Definitions .....   | 58        |
| Multiple Result Documents .....  | 58        |
| Temporary Trees .....  | 59        |
| The Oracle XSLT Extensions .....   | 59        |
| Useful Built-in Java Oracle XSLT Extensions .....                            | 60        |
| The XSLT Virtual Machine .....   | 60        |
| XSLT and the Database .....  | 61        |
| Best Practices .....   | 61        |
| Tuning Tips for XSLT .....   | 61        |
| The document() Function in XSLT .....  | 62        |
| Improving the Overall Performance of XSLT for Multiple Transformations ..... | 62        |
| <b>4 Validating XML with DTDs and XML Schemas .....</b>                      | <b>63</b> |
| Introducing the DTD .....  | 64        |
| Validating XML Against DTDs .....  | 66        |
| Introducing the XML Schema Language .....                                    | 66        |
| Simple and Complex Datatypes .....   | 68        |
| Validating XML with XML Schemas (XSDs) .....                                 | 73        |
| XML Document Models and the Database .....                                   | 75        |
| Mapping DTDs to Database Schemas .....                                       | 75        |
| Mapping XML Documents to a Database Schema .....                             | 76        |
| Supported Database Mappings .....  | 76        |
| Best Practices .....   | 79        |
| Designing Your Schema .....  | 79        |
| Elements vs. Attributes .....  | 79        |
| Designing Element and Attribute Names .....                                  | 80        |
| Loading External DTDs from a JAR File .....                                  | 80        |
| <b>5 XML Operations with XQuery .....</b>                                    | <b>83</b> |
| Introducing XQuery .....   | 84        |
| Basics .....   | 85        |
| Expressions .....  | 85        |

|  |            |
|--|------------|
| Query Prolog .....   | 87         |
| Introducing XQueryX .....  | 88         |
| The Oracle XQuery Engine .....   | 89         |
| Setting Up the Environment .....   | 89         |
| Testing Your Installation .....  | 89         |
| Querying XML Documents .....   | 91         |
| Running in Interactive Mode .....  | 91         |
| Querying XML from the Command Line .....                                 | 91         |
| Querying XML with XQueryX .....  | 91         |
| XQuery and the Oracle Database .....                                     | 92         |
| XQuery API for Java .....  | 92         |
| Querying XML in the Database .....                                       | 92         |
| Best Practices .....   | 93         |
| XQuery Versus XSLT 2.0 .....   | 93         |
| XQuery Versus SQL/XML .....  | 94         |
| <b>6 XML Messaging and RPC with SOAP .....</b>                           | <b>95</b>  |
| Introducing SOAP .....   | 96         |
| Literal, Encoded SOAP Messages .....                                     | 96         |
| One-Way and Two-Way SOAP Messaging and RPCs .....                        | 98         |
| Using SOAP and the Oracle XDK .....                                      | 99         |
| SOAP Client .....  | 99         |
| SOAP Server .....  | 99         |
| SOAP Handlers .....  | 100        |
| Using SOAP and the Oracle Database .....                                 | 100        |
| Oracle Streams AQ Support .....  | 100        |
| AQ Servlet .....   | 101        |
| Enqueuing and Dequeuing Messages .....                                   | 101        |
| Using SOAP from PL/SQL .....   | 103        |
| Best Practices .....   | 104        |
| SOAP vs. JAX-RPC .....   | 104        |
| SOAP vs. JMS .....   | 104        |
| <b>7 Putting It All Together with XML Pipeline, JSPs, and XSQL .....</b> | <b>105</b> |
| Introducing the XML Pipeline Processor .....                             | 106        |
| Multistage XML Processing .....  | 107        |
| Processing XML with JSPs and XML Beans .....                             | 108        |
| DOMBuilder Bean .....  | 109        |
| XSLTransformer Bean .....  | 111        |
| DBAccess Bean .....  | 111        |
| XMLDBAccess Bean .....   | 113        |
| XMLDiff Bean .....   | 114        |
| XMLCompress Bean .....   | 114        |
| XSDValidator Bean .....  | 114        |
| Using XML Beans in JSPs .....  | 115        |
| Introducing the XSQL Page Publishing Framework .....                     | 116        |
| The XSQL Pages .....   | 116        |
| Installing the XSQL Servlet .....  | 118        |
| Submitting Queries to the XSQL Servlet .....                             | 118        |

|   |     |
|---|-----|
| Transforming the XSQL Output with Stylesheets ..... | 119 |
| Inserting XML Documents with the XSQL Servlet ..... | 122 |
| Updating Data with the XSQL Servlet .....           | 122 |
| Using JSPs and XSQL Pages .....                     | 125 |
| Best Practices .....                                | 125 |
| Creating a More Secure Connection .....             | 126 |
| When You Need Simple JSP XML Functionality .....    | 126 |

PART II

**Oracle XML Management for DBAs**

|   |            |
|---|------------|
| <b>8 Getting Started with the Oracle XML Database .....</b> | <b>129</b> |
| A Brief History of XML Support in Oracle Database .....     | 130        |
| Setting Up the Oracle XML Database .....                    | 132        |
| Installing Oracle XML Database .....                        | 133        |
| Installing the Sample Database Schemas .....                | 137        |
| Creating a User to Run the XMLType Samples .....            | 138        |
| Setting Up a WebDAV Folder .....                            | 138        |
| What Is the Oracle XML Database? .....                      | 140        |
| XMLType .....   | 141        |
| XMLType Views .....   | 145        |
| SQL/XML Processing .....                                    | 146        |
| Oracle XML DB Repository .....                              | 147        |
| Oracle Text .....   | 147        |
| Oracle Advanced Queuing .....                               | 148        |
| XML Database and Standards .....                            | 148        |
| Designing the XML Database .....                            | 149        |
| How to Store XML Data .....                                 | 150        |
| How to Retrieve and Generate XML .....                      | 155        |
| How to Search XML Data .....                                | 155        |
| How to Design XML Database for Web Applications .....       | 155        |
| How to Design XML Database for Messaging Application .....  | 155        |
| Summary .....   | 156        |
| <b>9 Storing XML Data .....</b>                             | <b>157</b> |
| Storing XML Documents in CLOB XMLTypes .....                | 158        |
| Updating and Querying CLOB XMLTypes .....                   | 158        |
| Dealing with Character Encoding for CLOB XMLTypes .....     | 158        |
| Storing XML Documents in XML Schema–based XMLTypes .....    | 159        |
| XML Schema Registration .....                               | 160        |
| XML Schema Annotations .....                                | 165        |
| XML Data Loading .....                                      | 168        |
| XML Schema Validation .....                                 | 172        |
| Oracle XML DB Repository .....                              | 173        |
| Storing XML Documents in Relational Tables .....            | 176        |
| XML SQL Utility .....                                       | 177        |
| TransX Utility .....  | 182        |
| DBMS_XMLSTORE .....   | 182        |

|   |            |
|---|------------|
| Using External Tables                               | 184        |
| Schema Evolution                                    | 185        |
| Best Practices                                      | 186        |
| Handling Document Type Definitions                  | 186        |
| Creating XML Schema-based XMLTypes                  | 186        |
| Specifying Namespaces                               | 186        |
| Summary   | 188        |
| <b>10 Generating and Retrieving XML</b>             | <b>189</b> |
| Generating XML from SQL Data with SQL XML Functions | 190        |
| XMLELEMENT() and XMLATTRIBUTES()                    | 192        |
| SYS_XMLGEN()  | 193        |
| XMLFOREST()   | 194        |
| XMLSEQUENCE()                                       | 195        |
| XMLCONCAT()   | 196        |
| XMLAGG()  | 196        |
| SYS_XMLAGG()  | 197        |
| XMLCOLATTVAL()                                      | 197        |
| UPDATEXML()   | 197        |
| Generating XML from SQL Data with DBM XMLGEN        | 199        |
| Canonical Mapping                                   | 199        |
| Print Formatting                                    | 201        |
| Data Fetching                                       | 202        |
| Using REF Cursor                                    | 204        |
| Using Bind Variables                                | 204        |
| Dealing with Special Characters                     | 205        |
| Retrieving Using XMLType and SQL/XML Functions      | 206        |
| extract() and existsNode()                          | 208        |
| EXTRACTVALUE()                                      | 208        |
| Generating XML Schemas                              | 209        |
| Creating XMLType Views                              | 211        |
| Processing XML                                      | 212        |
| Dealing with XML Fragments                          | 212        |
| DOM Editing   | 213        |
| Best Practices                                      | 216        |
| Summary   | 218        |
| <b>11 Searching XML Data</b>                        | <b>219</b> |
| XPath-Based Searches                                | 220        |
| Searching the XML Document Using XPath              | 221        |
| How XPath-Based Searching Works                     | 224        |
| Optimizing XPath-Based Queries Using Indexes        | 227        |
| Full Text Search                                    | 230        |
| Searching XML Using Oracle Text                     | 231        |
| How Oracle Text Search Works                        | 235        |
| Optimizing Oracle Text Searches                     | 236        |
| Advanced Text Searches                              | 237        |

|   |            |
|---|------------|
| Best Practices                                  | 239        |
| When to Use XPath-Based Searches                | 239        |
| When to Use Oracle Text Searches                | 239        |
| When to Use Oracle Text Partitioned Indexes     | 240        |
| Summary   | 240        |
| <b>12 Managing the Oracle XML Database</b>      | <b>241</b> |
| Installed Oracle XML DB Components              | 242        |
| Configuring the Oracle XML DB                   | 244        |
| Understanding xdbconfig.xml                     | 245        |
| Configuring xdbconfig.xml                       | 245        |
| Security Management                             | 248        |
| Protecting Data in the Oracle XML DB Repository | 248        |
| Securing DBUri Operations                       | 250        |
| Summary   | 251        |

PART III

**Oracle XML for Java Developers**

|   |            |
|---|------------|
| <b>13 Getting Started with Oracle XML and Java</b>      | <b>255</b> |
| The Oracle XDK Java Libraries                           | 256        |
| xmlparserv2.jar   | 256        |
| xml.jar   | 256        |
| xschema.jar   | 256        |
| oraclexml.jar and xsqlexport.jar                        | 256        |
| xmlcomp.jar, xmlcomp2.jar, xmldemo.jar, and jdev-rt.zip | 257        |
| xsu12.jar   | 257        |
| classgen.jar  | 257        |
| xdb.jar   | 257        |
| xmlmsg.jar  | 257        |
| transx.zip  | 257        |
| orai18n.jar   | 257        |
| classes12.jar and ojdbc14.jar                           | 258        |
| The JDK Environment                                     | 258        |
| Setting Up the JDK Environment                          | 258        |
| Using the XDK with Oracle JDeveloper                    | 260        |
| Setting Up an XDK Environment                           | 260        |
| Setting Up a Database Connection                        | 261        |
| Creating an XDK Component Palette                       | 264        |
| Summary   | 266        |
| <b>14 Building an XML-Powered Web Site</b>              | <b>267</b> |
| An XML-Enabled FAQ Web Site                             | 268        |
| Designing the Framework                                 | 268        |
| Creating the FAQ Database                               | 269        |
| Designing the FAQ Schema                                | 269        |
| Creating a Database User                                | 272        |
| Registering the FAQ Schema                              | 272        |
| Loading the FAQs  | 273        |

|  |            |
|--|------------|
| Connecting the FAQ Web Site to the XML Database .....                  | 274        |
| Building the XSQL Home Page .....                                      | 275        |
| Creating the FAQ List .....  | 275        |
| Filtering the FAQ List .....   | 277        |
| Adding Pagination to the FAQ Listing .....                             | 277        |
| Displaying the FAQ and Answers .....                                   | 280        |
| Creating a Glossary .....  | 283        |
| Creating the Glossary Schema .....                                     | 283        |
| Loading the Glossary .....   | 284        |
| Linking to the Glossary .....  | 285        |
| Displaying the Glossary Definitions .....                              | 286        |
| Searching the FAQs .....   | 287        |
| Summary .....  | 288        |
| <b>15 Creating a Portal Site with XML and Web Services .....</b>       | <b>289</b> |
| Designing the Framework .....  | 290        |
| Designing the Static and Dynamic Areas .....                           | 293        |
| Creating the Dynamic Areas .....                                       | 293        |
| Creating the Static Areas .....  | 300        |
| Adding the Portal Functionality .....                                  | 301        |
| Creating the User Schema .....   | 301        |
| Creating the Login Area .....  | 302        |
| Creating the User Application Form .....                               | 304        |
| Creating an Administration Page .....                                  | 307        |
| Summary .....  | 311        |
| <b>16 Developing an XML Gateway Application with SOAP and AQ .....</b> | <b>313</b> |
| Designing the Framework .....  | 314        |
| A Conventional Solution .....  | 314        |
| A Stream-Based One-Step Solution .....                                 | 315        |
| Interfacing to the Internet .....                                      | 316        |
| Creating the Framework .....   | 317        |
| Creating the Database Schema .....                                     | 317        |
| Creating the XML Purchase Orders .....                                 | 321        |
| Creating the XML Messaging Gateway .....                               | 323        |
| Creating the Messaging Schema .....                                    | 324        |
| Creating the AQ Agent and Queue .....                                  | 325        |
| Creating the AQ PO Process Procedures .....                            | 328        |
| Extending the Framework .....  | 332        |
| Extending the Application's Functionality .....                        | 341        |
| Submitting SOAP Messages .....   | 341        |
| Handling of xsi:types in POs .....                                     | 341        |
| Generating an E-Mail Confirmation .....                                | 341        |
| Summary .....  | 342        |
| <b>17 Developing XML-Based Reusable Components .....</b>               | <b>343</b> |
| Designing the Framework .....  | 344        |
| Simple Pipeline Examples .....   | 345        |
| SAX Parsing and Printing .....   | 346        |
| Parsing and Checking for Differences .....                             | 348        |

|   |     |
|---|-----|
| Building the Pipeline Application .....   | 352 |
| The XSDSchemaBuilder Process .....  | 354 |
| The XSDValProcess Process .....   | 354 |
| The XSDConditionalValProcess Process .....  | 357 |
| Running the Pipeline Application .....  | 360 |
| Processing an Invalid Document .....  | 360 |
| Processing a Document That Is Valid Against the Remote Schema .....               | 361 |
| Processing an Invalid XML Document<br>with Consistent Local and Remote XSDs ..... | 361 |
| Processing an Invalid Document Against Both Schemas with Change .....             | 362 |
| Summary .....   | 362 |

PART IV

**Oracle XML for C Developers**

|   |            |
|---|------------|
| <b>18 Getting Started with Oracle XML and C .....</b> | <b>365</b> |
| The Oracle XDK C Libraries .....                      | 366        |
| libxml10.a, libxml10.so, and oraxml10.dll .....       | 366        |
| libcore10.a, libcoresh10.so, and libcore10.dll .....  | 366        |
| libnls10.a and oranls10.dll .....                     | 367        |
| libunls10.a and oraunls10.dll .....                   | 367        |
| Setting Up Your C XML Development Environment .....   | 367        |
| UNIX Setup of XDK C Components .....                  | 367        |
| Checking Your C Run-Time Environment .....            | 368        |
| Setting Up Your C Compile-Time Environment .....      | 370        |
| Windows Setup of XDK C Components .....               | 370        |
| Checking Your C Run-Time Environment .....            | 371        |
| Setting Up Your C Compile-Time Environment .....      | 372        |
| Confirming Your C Compile-Time Environment .....      | 372        |
| Setting Up Microsoft Visual C/C++ .....               | 372        |
| Summary .....   | 374        |
| <b>19 Building an XML-Managed Application .....</b>   | <b>375</b> |
| Designing the Framework .....                         | 376        |
| The XML Media Files .....                             | 377        |
| Creating an XML Configuration File .....              | 378        |
| Defining the XSLT Stylesheets .....                   | 379        |
| Defining the Profiles .....                           | 380        |
| Creating the XSL Stylesheets .....                    | 383        |
| Creating the publishcat Application .....             | 386        |
| Summary .....   | 391        |
| <b>20 Build an XML Database OCI Application .....</b> | <b>393</b> |
| Designing the Framework .....                         | 394        |
| Setting Up the OCI Application Environment .....      | 395        |
| The OCI XML Application Headers .....                 | 395        |
| The OCI XML Application Libraries .....               | 396        |
| The OCI XML Application Make Files .....              | 396        |

|   |            |
|---|------------|
| The Update Application  | 397        |
| Initializing the OCI Application  | 398        |
| Retrieving a DOM of the Record List via OCI                               | 401        |
| Performing Unified DOM Operations   | 406        |
| Running the xmlupdate Application   | 407        |
| Summary   | 408        |
| <b>21 Create an XML-Configured High-Performance Transformation Engine</b> | <b>409</b> |
| Designing the Framework   | 410        |
| Compiling Stylesheets with xslcompile                                     | 411        |
| Running the XSLT Virtual Machine with xsbtransform                        | 414        |
| Summary   | 418        |

## PART V

**Oracle XML for C++ Developers**

|   |            |
|---|------------|
| <b>22 Getting Started with Oracle XML and C++</b>   | <b>421</b> |
| The Oracle XDK C++ Libraries                        | 422        |
| libxml10.a, libxml10.so, and libxml10.dll           | 422        |
| libcore10.a, libcoresh10.so, and libcore10.dll      | 422        |
| libnls10.a and oranls10.dll                         | 423        |
| libunls10.a and oraunls10.dll                       | 423        |
| Setting Up Your C++ XML Development Environment     | 423        |
| UNIX Setup of XDK C++ Components                    | 423        |
| Checking Your C++ Run-Time Environment              | 424        |
| Windows Setup of XDK C++ Components                 | 426        |
| Checking Your C++ Run-Time Environment              | 427        |
| Setting Up Your C++ Compile-Time Environment        | 428        |
| Setting Up Microsoft Visual C/C++                   | 428        |
| Summary   | 431        |
| <b>23 Build an XML Database OCI C++ Application</b> | <b>433</b> |
| Designing the Framework                             | 434        |
| Setting Up the C++ OCI XML Application Environment  | 435        |
| The OCI XML Application Headers                     | 435        |
| The OCI and C++ XML Application Libraries           | 437        |
| Creating the C++ OCI Helper Class                   | 437        |
| Initializing the C++ Database XML Application       | 438        |
| Handling OCI Errors                                 | 439        |
| Connecting to the Database                          | 440        |
| Disconnecting from the Database and Cleaning Up     | 441        |
| Creating the C++ Query Application                  | 443        |
| Selecting into an XMLType                           | 444        |
| Initializing the XDK for XMLType XOB Access         | 446        |
| Querying an XMLType with the C++ XDK APIs           | 447        |
| Running the Application                             | 449        |
| Summary   | 450        |

|  |            |
|--|------------|
| <b>24 Building an XML Data-Retrieval Application</b> .....     | <b>451</b> |
| Designing the Framework .....                                  | 452        |
| Building the cpxextract Application .....                      | 452        |
| Creating the Generic Functions .....                           | 453        |
| Instantiating the Generic Functions with cpxextractForce ..... | 458        |
| Creating the Main Program with cpxextractMain .....            | 459        |
| Running the cpxextract Application .....                       | 459        |
| Running cpxextract in Extraction Mode .....                    | 459        |
| Running cpxextract in Splitter Mode .....                      | 460        |
| Extending the Framework .....                                  | 460        |
| An XML Document Pruning Use Case for cpxextract .....          | 460        |
| A Content-Management Use Case for cpxextract .....             | 461        |
| Summary .....  | 462        |

PART VI

**Oracle XML for PL/SQL Developers**

|  |            |
|--|------------|
| <b>25 Getting Started with Oracle XML and PL/SQL</b> .....                       | <b>465</b> |
| Setting Up the Environment .....   | 466        |
| PL/SQL XML Processing Techniques .....   | 466        |
| Parsing XML .....  | 467        |
| Processing XML Using DOM .....   | 474        |
| Processing XML Using XSLT .....  | 478        |
| Setting Up Oracle JVM .....  | 480        |
| Summary .....  | 480        |
| <b>26 Building PL/SQL Web Services</b> .....                                     | <b>481</b> |
| Building and Publishing the First Database Web Service .....                     | 482        |
| Setting Up the Database Schema .....   | 482        |
| Publishing the PL/SQL Web Service Using Oracle JDeveloper 10g .....              | 485        |
| Calling the Web Service from Clients .....                                       | 489        |
| Debugging the Web Service .....  | 491        |
| Consuming a Web Service Within the Oracle Database .....                         | 492        |
| Constructing SOAP Messages .....   | 493        |
| Sending Out SOAP Messages Using UTL_HTTP .....                                   | 494        |
| Extending the Application .....  | 497        |
| When to Build Web Services in the Database Server .....                          | 497        |
| Setting Up the Security Protection .....   | 498        |
| Building Different Types of Web Services .....                                   | 498        |
| Summary .....  | 499        |
| <b>27 Extending PL/SQL XML Functionality with Java</b> .....                     | <b>501</b> |
| Creating the Java Stored Procedure to Process XML .....                          | 502        |
| Implementing the Java Code .....   | 502        |
| Deploying the Java Code to the Oracle JVM .....                                  | 503        |
| Creating the PL/SQL Specification .....  | 504        |
| Running the Java Stored Procedure .....  | 504        |
| Simplifying Deployment of Java Stored Procedures Using Oracle JDeveloper 10g ... | 505        |

|   |            |
|---|------------|
| Processing XML in the Oracle JVM .....                      | 507        |
| Resolving URL References .....                              | 507        |
| SAX XML Processing .....                                    | 511        |
| Developing Your Own Java Stored Procedures .....            | 515        |
| When to Use Java Stored Procedures .....                    | 515        |
| How to Debug Java Stored Procedures .....                   | 516        |
| Summary .....   | 517        |
| <b>28 Putting It All Together .....</b>                     | <b>519</b> |
| The Oracle XML Platform .....                               | 520        |
| XML Processing Tier Decisions .....                         | 521        |
| Database Design Decisions for XML .....                     | 522        |
