Introduction	xxi

Part I Tour Windows Server 2008

1 The Windows Server 2008 Delta	3
Resource Pools vs. Virtual Service Offerings	4
New Feature Listings	4
Build the Windows Server 2008 Network	5
Organization Size Definitions	5
Common Networking Functions	7
New Features in Windows Server 2008	11
Improvements to Operating System Fundamentals	12
Usability	18
Networking Infrastructure	22
Deployment Infrastructure	25
Application Infrastructure	28
Security Infrastructure	38
Disk and File Subsystem	46
The Next Step	52
2 Interact with Windows Server 2008	53
The User Interface	54
Initial Configuration Tasks	59
Server Manager	61
Other Ways to Do Things	67
New Ways to Do Things in WS08	72

Part II Plan and Prepare

3 Plan for Windows Server 2008	77
Build the Foundation of the Network	78
The Server Lifecycle	79
The Service-Offering Lifecycle	83
Benefit from a Server Construction and Management Model	87
Design the Network Architecture	96
A Structured Approach: Use Standard Operating Procedures	97

Perform a Situation Review and Needs Analysis	104
Network with Windows Server 2008	108
Use the Technological Lab as a Testing Ground	111
Use a Structured Testing Strategy	113
Build Your Resource Pool in Support of Virtual Laboratory Testing	113
4 Explore Windows Server 2008 Installation Modes	117
The Installation Process	118
Hardware Requirements	119
Server Sizing for Resource Pools and Virtual Service Offerings	119
Sizing Recommendations for Resource Pools	125
Dual-Boot Considerations	126
Rely on Installation Documentation	128
Run Through the Installation	130
Automating Installations	152
Preparation and Prerequisites	153
Use Unattended Installations	154
Use Custom System Images	162
Windows Deployment Services	168
Put the Server in Place	171

Part III Design Server Roles

5 Prepare Your Identity Management	175
Introduce Active Directory Domain Services	177
New Features for Active Directory	181
The Nature of Active Directory Domain Services	182
Active Directory Federation Services	184
Design the Solution—Use the Active Directory Blueprint	185
ADDS Partitioning	185
ADDS Service Positioning	187
Implementation Plan	188
Put the Blueprint into Action	188
Forest/Tree/Domain Strategy	189
Forest Design	189
Forest Design Example	192
Production Forest Design	193
Domain Strategy	195
Other Forest Domain Designs	198
Forest Design Best Practices	198
Design the Naming Strategy	198
Naming Best Practices	202
Design the Production Domain OU Structure	203
The OU Design Process	203

The PCs Object OU Structure	207
The Virtual Service Offerings Object OU Structure	207
The People Object OU Structure	208
Replicate the OU Structure to Other Domains	210
Production OU Design Best Practices	210
ADDs and Other Directories	212
Microsoft Identity Lifecycle Manager	213
Integrated Applications for Network Operating System Directories	215
ADDs Integration Best Practices	216
Service Positioning	217
Flexible Single Masters of Operations Positioning	217
Global Catalog Server Positioning	219
Domain Controller Positioning	219
DNS Server Positioning	220
Server Positioning Best Practices	221
Server Positioning Scenario	221
Site Topology	227
Site Topology Design	229
Create Site Link Bridges	230
Best Practices for Site Topology Design	231
T&T Corporation's Site Topology Scenario	232
Schema Modification Strategy	232
Use Active Directory Lightweight Directory Services	236
Schema Modification Strategy Best Practices	237
ADDs Implementation Plan	237
New and Revised ADDs IT Roles	238
The Ongoing ADDs Design Process	238
6 Build the Windows Server 2008 Network Infrastructure	241
Build Your Resource Pool Infrastructure	241
Create the Utility Forest	245
Configure the Volume Shadow Copy Service	246
Build Your Virtual Service Offerings	249
Choose the Migration Approach	250
Choose What to Migrate First	252
Choose the Processor Architecture	259
Assign Resources to VSOs	260
Implement the Parallel Network	263
Prepare the Parallel Network	266
Create the Production Active Directory	268
Forest Staging Activities	271
Install the First Server in a Forest	272
Create the Second DC in the Forest Root Domain	280

Create the First DC in the Global Child Domain	
Production Domain	282
Create the Second DC in the Global Child Production Domain	284
Connect the Enterprise Network	286
Network Infrastructure Staging Activities	287
Configure the First Network Infrastructure Server	287
Configure the Second Network Infrastructure Server	295
Move Servers and Configure Domain Replication	296
Work with Windows Deployment Services	298
Install WDS	298
Work with WDS	299
Upgrade an Existing Active Directory to WS08	299
The Upgrade Process	300

Part IV Manage Objects with Windows Server 2008

7 Prepare for Object Management	307
Manage Objects with Active Directory Domain Services	308
Group Policy Concepts	308
Group Policy Processing	310
Policy Loopback	317
Policy Filtering	318
Fast Logon Optimization	319
Policy Design	321
Design a GPO Strategy	321
Create an OU Design for PC Management Purposes	323
Centralized PC Administration	323
Decentralized PC Administration	331
Design for Delegation	332
Delegation Within ADDS	332
Design a Delegation Strategy	335
PC Management	337
Software Installations with WS08	337
Software Delivery in the Network	340
Complete the OU Strategy	344
Put the PC OU Infrastructure in Place	345
Manage User Objects with Active Directory Domain Services	348
The Active Directory Domain Services User Object	349
Use Template Accounts	360
Massive User Management	361
Manage and Administer Groups	362
WS08 Groups Types and Group Scopes	363
Best Practices for Group Management/Creation	371
Create an OU Design for User Management Purposes	377
The People OU Structure	378

User-Related GPO Concepts	380
Manage User Data	383
Logon and Logoff Scripts	386
Complete the People OU Structure	387
Put the People OU Infrastructure in Place	389
8 Build the Virtual Service Offerings Infrastructure:	
File and Print Servers	391
Prepare File and Print Servers	393
Share Files and Folders	393
Structure Disk Volumes for Resource Pools	395
Structure Disk Volumes for Virtual Service Offerings	396
Shadow Copies	402
Rely on the Search Service	403
Offline File Caching	404
Simple SAN	405
Create the File Server	405
Install the File Server Role	406
Create the Folder Structure	406
Enable File Server Processes	408
Share Folders	409
Publish Shares in Active Directory Domain Services	411
Find Shares in Active Directory Domain Services	412
Manage Folder Availability	413
Work with the Distributed File System	413
Use DFS Replication for Resource Pools	418
Folder Redirection and Offline File Settings	419
Share Print Services	421
Integration with Active Directory Domain Services	422
Share Files and Printers for Non-Windows Clients	433
Server Requirements by Role	434
Design the Virtual Service Offerings OU Structure	434
9 Build the Virtual Service Offerings Infrastructure:	
Application-Oriented Servers	437
Build Application Servers	438
Share Commercial and Corporate Applications	439
Application Development Support	440
Legacy Application and Software Testing	442
Application Server Types	443
Explore Application Virtualization	443
Prepare Web Servers (Dedicated or Application)	445
The IIS 7 Feature Set	446
Install the Application or Dedicated Web Server Role	449
Work with Application Support Services	452

- Prepare Terminal Servers 455
 - Share Applications with Terminal Services 455
 - Deploy Terminal Services Applications 469
 - Create Highly Available Terminal Services 473
 - The Remote Desktop Console:
 - The Administrator’s Best Friend 474
- Collaboration Servers 479
 - Deploy Windows SharePoint Services 480
 - Prepare Windows Streaming Media Servers 484
- Server Requirements by Role 485
- Design the Virtual Service Offerings OU Structure 485

Part V Secure Windows Server 2008

- 10 Design Your Security Infrastructure 491**
 - Security Basics 492
 - Design a Security Policy 494
 - The Castle Defense System 494
 - The Security Plan 496
 - The Microsoft WS08 Security Guide 499
 - Windows Server 2008 Security 499
 - Secure Resource Pools 502
 - Secure Virtual Service Offerings 504
 - Apply the Castle Defense System 507
 - Layer 1 – Critical Information 508
 - Layer 2 – Physical Protection 509
 - Layer 3 – Operating System Hardening 510
 - Layer 4 – Information Access 537
 - Layer 5 – External Access 549
 - Manage the Security Policy 556
- 11 Build for Business Continuity 557**
 - Plan for System Redundancy 558
 - Protect the Resource Pool 558
 - Protect the Virtual Service Offerings 561
 - Prepare for Potential Disasters 562
 - Use WS08 Clustering Services 562
 - Cluster Services for Resource Pools 563
 - Cluster Services for Virtual Service Offerings 564
 - Network Load Balancing 566
 - Multicast Versus Unicast Modes 567
 - Single Affinity Versus No Affinity 567
 - Install and Configure NLB Clusters 568
 - Windows Server Failover Clustering 571
 - Cluster Compatibility List 571

Server Cluster Concepts	571
Cluster Configurations	575
Geographically Dispersed Clusters	576
Resource Pool Failover Cluster Considerations	577
Further Server Consolidation	586
Recovery Planning for Your Network	587
Recovery Strategies for Windows Server 2008	588
System Recovery Strategies	589
Troubleshooting Techniques	589
Data Protection Strategies for Resource Pools	591
Data Protection Strategies for Virtual Service Offerings	593
Select a Third-Party Backup Tool	594
Physical to Virtual Conversions	595
Finalize Your Resiliency Strategy	597

Part VI Migrate to Windows Server 2008

12 Put the VSO Network into Production	601
Considerations for the Migration to the Parallel VSO Network	601
The Server Rotation Process (Resource Pools)	602
The Migration Order (Virtual Service Offerings)	604
Begin the Migration to the Parallel VSO Network	608
Migrate Security Principals	608
Migrate Network Infrastructure Servers	619
Migrate Web Sites	620
Build Terminal Services Servers	621
Migrate File Servers	621
Migrate Print Servers	625
Migrate SharePoint Sites	627
Decommission the Legacy Network	629
Prepare Your New Support Structure	630
New and Revised ADDS IT Roles (VSO Network)	630
New Resource Pool Roles	631
Design the Services Administration Plan	633
Rely on the WS08 Remote Server Administration Tools	636
Build a New Approach to Administration	637
The Administrative Task List	641

Part VII Administer Windows Server 2008

13 Common Administration Tasks	645
General Server Administration	649
General Server Administration Activities	649
Hardware Administration	676

Backup and Restore	678
Remote Administration	681
File and Print Server Administration	683
File Service Administration	685
Print Service Administration	696
Cluster Services Management	701
Network Infrastructure Server Administration	704
DHCP/WINS Server Administration	704
Deployment Servers	717
NLB Clusters	718
Network Policy and Access Services	719
Identity Server Administration	722
Domain Controller Administration	725
Namespace Server Management (DNS)	763
Application and Collaboration Server Administration	765
Administration of Dedicated Web Servers	765
Administration of Application Servers	770
Administration of Terminal Services	773
Windows SharePoint Services Administration	777
Performance and Monitoring Administration	781
Final Notes	786
Index	787
